

Adult Income

- Source of data- Kaggle

By: Rosa R

Adult Income

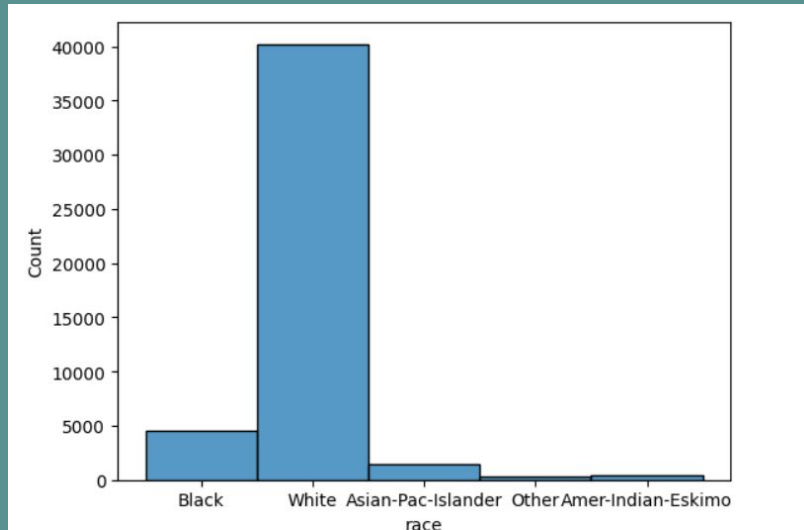

This data describes the features related to adult incomes. We compare the difference between someone who pursued higher education vs someone who didn't and what that outcome was.

This is to show the Department of Education areas of focus for improvement of outcomes.

Visualizations

- A seaborn countplot and histogram visualized for numeric datatype column.
- Also, a barplot was visualized for categorical column.
- This gave a good baseline for the numeric and categorical columns.

The majority of employees are white compared to any other race.

Income and Education

Here you can see a clear correlation between income and education. Very few people with a high school education (not grad) can still make over 50k.

Machine Learning Using the Following Models:

- Logistic Regression Model

- Random Forest Classifier Model

- KNN Classifier Model

Models Evaluated & Results

The Final Model Chosen was a Logistic Regression PCA Tuned Model.

	Model	Accuracy Score	Precision Score	Recall Score	F1 Score	ROC	Best Parameters	Execution Time
0	Random Forest	0.815565	0.647258	0.584068	0.614041	0.738645	N/A	16.70
1	Logistic Regression	0.794108	0.562208	0.814915	0.665375	0.801021	N/A	5.08
2	KNeighbors	0.689629	0.438200	0.835254	0.574828	0.738016	N/A	13.83
3	Logistic Regression Tuned	0.795300	0.563964	0.815932	0.666944	0.802155	{'logisticregression__C': 0.5, 'logisticregres...	633.42
4	Logistic Regression PCA Tuned	0.793767	0.560998	0.823051	0.667216	0.803497	{'logisticregression__C': 0.5, 'logisticregres...	531.10
5	Random Forest PCA Tuned	0.790446	0.556794	0.812542	0.660786	0.797788	{'randomforestclassifier__max_depth': 10, 'ran...	3511.21
6	KN Tuned	0.743784	0.493762	0.791525	0.608152	0.759647	{'kneighborsclassifier__n_neighbors': 10}	121.06

Recommendations

Model Performance

- Given the results of the models after running with PCA I think Logistic Regression PCA Tuned performed slightly better than Random Forest therefore I would use this as my prediction model and suggest to my stakeholder. KNeighbors actually scored lower before using PCA but still lower than both other models.

Thank
You

The image features the words "Thank You" in a highly stylized, cursive script. The text is rendered in two shades of blue: a vibrant cyan and a darker teal. The letters are thick and have a 3D effect, with the cyan color appearing on the top and front surfaces and the teal on the sides and back. The letters are surrounded by several small, four-pointed stars and dots in the same two shades of blue. The entire graphic is set against a white square background, which is itself centered on a larger teal background.
